## Venous Return Cannulae, Dual Stage, Wire-reinforced Tubing, 32/40 Fr, RDS-61040

N | Calmed Labs 1: 100-137400 | 32/40F

The Dual Stage Venous Return Cannula is indicated for single tube venous drainage from the right atrium and vena cava during cardiopulmonary bypass surgery. The Dual Stage Cannula has a proximal flexible polyvinyl chloride tubing segment for drainage of the right atrium. The catheter body tapers to a flexible polyvinyl chloride tubing distal segment that ends in a straight fluted distal tip for drainage of the vena cava. The proximal and distal segments of the catheter are available in wire or non-wire reinforced tubing.

| Order Code            | RDS-61040 |
